ADDITIONAL REMARKS.

The daily readings are correct for the 3 months. The mistake is due to errors of addition —
As to the rainfall taken at 9 a.m. of the 1st of January 1923 it is impossible for me to trace it back, but it has been entered for the 31st of Dec, 1922
I was not looking after the rainfall last year, but I saw the man who certified that the rainfall as read on any day was entered for the previous day, as explained. However the mistake that was made is that the measurements which were all taken in millimetres were entered on the wrong form. Yours truly

SIGNED Rev. Bro. Lewis

(Les Blanches, St Martin's, Guernsey).

The year 1928 was very warm & very wet - the warmest since 1921, & the wettest since 1919. Compared with this Station's 30 years averages, 1894-1923, the twelvemonth was 1·1 deg. warmer than the normal (51·0 deg.) and had an excess rainfall amounting to 8·02 in., no less than 42·30 in. having been measured against an average of 34·28 in.

For the second year in succession the rainfall was continuously in excess of the average. At the end of March the year was the second wettest of the 35 years, 1894-1928, & during May it became the wettest of the series, a position it held till the 12th of August when it was beaten by the year 1912. Four months only had a deficient rainfall, viz. July, August, September & December, while of the wet months January went out with a surplus of 2·88 in. and October of 2·83 in. the total number of rain days, 194, was deficient by 4 days.
